

SOLUTION SHOWCASE

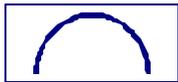

Roughness, Waviness & Form

Digital Metrology Solutions can provide software enhancements giving your existing equipment the latest analytical capabilities. Custom, offline data analysis tools are also available.

Roundness & Geometry

Digital Metrology Solutions can help you be sure that your roundness and geometry measurements are able to ensure the desired levels of quality per the latest standards.

Custom Profiles & Geometries

Digital Metrology Solutions can develop add-on software for many CMM, profiling and geometry instruments for your toughest, most complex geometries.

Statistical Analysis & SPC

Digital Metrology Solutions can automate your measurement processes, provide multi-measurement analysis and provide data transfer directly to statistical analysis packages.

*“The value of a measurement is
in the application of its result”*

www.digitalmetrology.com

YOU NEED CUSTOM METROLOGY.

As someone who relies on dimensional and surface measurements you are most likely fighting battles on many fronts.

- *I can't trust my results.*
- *Forget the theory; I need practical training for my operators.*
- *This measurement is just too difficult to make.*
- *I wish I could make this gage do _____ for me.*
- *My operators have too much influence on the results.*
- *I wish I could get a computer to do this for me.*
- *My supplier says the parts are good. I say they are bad.*
- *Some parts work, others don't, but they all measure the same.*

... and the list goes on.

Let's face it. Engineers and technicians in today's industries have to wear many hats – at the expense of not being able to “specialize”. However, the problems that these people are confronted with can often require additional, specialized help.

“There are many gage companies that are eager to tailor your problem to fit their solution.”

The measurement community is filled with “catalog based” or “off-the-shelf style” gage suppliers. This is great in that it keeps costs low for many measurement needs. However, when tough measurement-related problems arise, unbiased expert help is needed.

That's where Digital Metrology Solutions comes in.

THE CUSTOMER ISN'T STUPID.

Digital Metrology Solutions realizes that you, the customer, have unique knowledge and experience relative to your measurement needs. In this regard Digital Metrology Solutions seeks to “package” your process or product knowledge with the necessary metrology tools in order achieve a instrumentation, training or consulting-based solution.

“Digital Metrology Solutions specializes in applied metrology.”

Measurements are a means to an end and the results of a measurement are worth very little on their own. The value comes through applying the results in answering questions or solving problems. In this regard, measurements that target the customer's specific needs can bring the most value to the customer.

WHY DIGITAL METROLOGY?

Digital Metrology Solutions is committed to staying “ahead of the metrology game” thereby freeing you to focus on the work that matters most – your bottom line.

Digital Metrology Solutions is committed to being a “metrology leader”. This is accomplished through active leadership and participation in national and international standards as well as staying connected with metrology activities at universities, laboratories, and major instrument manufacturers.

Consulting. Digital Metrology Solutions brings to the table many years of experience in the areas of laboratory and shop floor based measurement, correlation issues, product design & process control.

Training. Digital Metrology Solutions can tailor a metrology training program to your specific needs. Current programs focus on surface metrology and GD&T as they relate to product and processes attributes.

Development. Digital Metrology Solutions has a solid history of developing robust systems for laboratory and shop floor applications. In addition, Digital Metrology Solutions can extend the capabilities of your existing measurement through the application of custom software and mathematics.
